Education

University of Waterloo, Bachelor of System Design Engineering

Expected April 2027

- **Courses:** Databases, Algorithms, Programming for Performance, Signals & Systems, HCI, Foundations of AI
- **Cumulative GPA:** 3.89 / 4.0

Skills

- **Languages:** TS/JS, Python, Java, C++, C#, Matlab
- **Technologies:** React, React Native, Next.js, Angular, .NET, Tailwind CSS, Framer Motion, Zustand, TanStack Query, Raylib, Pydantic, LangChain, CircleCI, AWS, Eppo

Experience

Genius AI

Jun – Aug 2026

Software Engineer Intern

New York, New York

- Rebuilt onboarding screens behind an experiment flag for 6 features in **React Native**; drove **25.3% lift** in day-7 adoption, led by **175.4%** more customers ordering a card reader, a segment with **28x higher** payment volume.
- Built the marketing site's staging environment deployment using **CircleCI** and **AWS S3/CloudFront** with **OIDC** auth; diagnosed a legacy CircleCI-GitHub integration limit and redesigned the trigger model.
- Owned an **A/B test** E2E, from flag rollout through metric and guardrail design, reaching **3.2k mobile users** and driving a **17% reduction** in subscription downgrades.

Miovision Technologies

Sep – Dec 2025

Software Engineer Intern

Waterloo, ON

- Built map-based UI for a traffic-signal optimization platform, configuring intersection detector, crosswalk, and lane placement with polygon manipulation, using **Angular** and **TailwindCSS**.
- Resolved a cluster of crosswalk detector defects affecting pedestrian signal accuracy, tracing them to a flawed data modeling assumption and adding **Cypress/Vitest** coverage.

MAGI Inc.

Jan – Apr 2025

Software Engineer Intern

New York, New York

- Proposed, designed, and shipped a fullstack Streaks retention feature end to end using **FastAPI** and **React**, launched behind a feature flag with A/B tested variants that boosted engagement **18-20%** and signups **25%**.
- Architected a mobile web product from scratch using **Next.js**, **TailwindCSS**, and **TanStack Query/Zustand**, building a swipe-based discovery flow with query-param-driven A/B tests and event tracking.
- Designed A/B tests to evaluate cost tradeoffs for **LangChain** and **OpenAI**-powered goal-tracking features.
- Refactored authentication using **Firebase** and **Supabase Auth**, adding OTP verification and password reset.

WOLF Advanced Technologies

May – Aug 2024

Software Engineer & Design Intern

Aurora, ON

- Led requirements-gathering meetings with internal staff for two platforms, translating needs into Figma designs and building features in **Blazor (C# .NET)**.
- Standardized a service layer pattern for async data fetching in **Blazor**, documenting it for broader use.
- Pioneered a Figma-based design system with reusable components, streamlining developer hand-off and reducing UI implementation time.

Hatch, Digital Products

Sep – Dec 2023

Software Engineer Intern

Mississauga, ON

- Developed front-end features and performance improvements in **Angular** and **TypeScript**, refactoring legacy code and increasing test coverage by **15%** with **Jest**.
- Evaluated open-source libraries for geospatial coordinate conversions on speed, implementation effort, and security compliance; documented the tradeoff analysis and implemented the selected library into production.
- Facilitated Scrum retrospectives to drive team engagement, and partnered with designers to proactively align feature specifications.
